

Your group will be given one of the following partial derivatives:

$$\begin{array}{llllll} a) & \left(\frac{\partial V}{\partial p}\right)_T & b) & \left(\frac{\partial U}{\partial p}\right)_S & c) & \left(\frac{\partial T}{\partial V}\right)_S \\ d) & \left(\frac{\partial V}{\partial T}\right)_p & e) & \left(\frac{\partial U}{\partial T}\right)_V & f) & \left(\frac{\partial p}{\partial V}\right)_T \\ g) & \left(\frac{\partial V}{\partial T}\right)_S & h) & \left(\frac{\partial T}{\partial V}\right)_p & i) & \left(\frac{\partial T}{\partial U}\right)_V \\ j) & \left(\frac{\partial V}{\partial p}\right)_S \end{array}$$

In your group, design an experiment to measure this derivative. Draw a sketch of the apparatus and describe how to convert directly measured data into a numerical value for the derivative.

If you finish with your derivative, you can try designing an experiment for the next derivative in the list.
