

Your group will be given one of the following partial derivatives:

$$\begin{array}{llllll} a) \quad \left(\frac{\partial V}{\partial p} \right)_T & b) \quad \left(\frac{\partial U}{\partial p} \right)_S & c) \quad \left(\frac{\partial T}{\partial V} \right)_S & d) \quad \left(\frac{\partial V}{\partial T} \right)_p & e) \quad \left(\frac{\partial U}{\partial T} \right)_V \\ f) \quad \left(\frac{\partial p}{\partial V} \right)_T & g) \quad \left(\frac{\partial V}{\partial T} \right)_S & h) \quad \left(\frac{\partial T}{\partial V} \right)_p & i) \quad \left(\frac{\partial T}{\partial U} \right)_V & j) \quad \left(\frac{\partial V}{\partial p} \right)_S \end{array}$$

In your group, design an experiment to measure this derivative. Draw a sketch of the apparatus and describe how to convert directly measured data into a numerical value for the derivative.

If you finish with your derivative, you can try designing an experiment for the next derivative in the list.
