

You will need to know some basic things from calculus:

- Differentiation and integration rules for elementary functions (such as u^n , $\sin u$, $\cos u$, e^u , $\ln u$).
- Product rule.
- Chain rule.
- Substitution in integrals.
- Integration by parts.

You can review these topics in any standard calculus text.

You can also read about them here:

Review of single-variable differentiation.

Review of single-variable integration.

You can try the practice exercises to test your knowledge.
