

1 Comparing Energies between Mass/Spring and LC

- (a) Compare the total energy in a typical mass/spring system in Weniger 212 ($k \approx 5 \text{ N/m}$; $mass \approx 50 \text{ g}$) to the total energy in the LC circuit problem. Comment on the difference or similarity.
- (b) Compare both energies to some other energy of interest, especially one that you hadn't thought about before.
